

TOP TIPS FOR CYBER SECURITY

PRACTICAL WAYS TO PROTECT YOURSELF ONLINE

cyber.gov.au/learn

AUTOMATIC UPDATES

Update your apps and devices

Updating your apps and devices can fix issues and address new security concerns or weaknesses.

Turn on multi-factor authentication (MFA)

MFA means having more than one check in place to prove your identity on an account.

Set up and perform regular backups

A backup is a digital copy of your information either to an external storage device or a server such as the cloud.

Set up secure passphrases

When MFA is not available, use a passphrase to secure your account. A passphrase is a strong type of password that uses four or more random words.

Recognise and report scams

Don't trust everything you read. Always be alert when clicking on attachments or links within emails or messages.
